

Example of Recipe

Face and Hand Cream with Jojoba Oil, O/W

Cold Processing

a)	PIONIER® 1053	18,00 %	HANSEN & ROSENTHAL KG
	PIONIER® NP 37 G	1,00 %	HANSEN & ROSENTHAL KG
	Jojoba Oil	2,00 %	
	Vitamine E	0,10 %	
	PERFUME FLORO PPI	0,20 %	CHARABOT
b)	Demin. Water	73,58 %	
	PIONIER® GLYCERINE 99,5%	5,00 %	HANSEN & ROSENTHAL KG
	ROKONSAL® KS-4	0,12 %	BIOCHEMA SCHWABEN

The components of the fatty phase a) are mixed by simply stirring; at the same time the thickening agent **PIONIER® NP 37 G** is dispersed in oil at the best way possible (the powdery polyacrylate is not oil-soluble but swells in water rapidly and constantly after this mechanical dispersion).

Finally the previously mixed watery phase b) is added and homogenized. Temperatures over 40 °C as well as extreme shearing are to be avoided.

All production steps can be effected at room temperature.

We give this proposal as a recommendation based on of our best knowledge. No responsibility, in regard to production results obtained, can be accepted by us.
